

SISCommerce: Maritime e-commerce

SISCommerce is one of the most complete e-commerce solutions for the maritime industry, allowing for efficient communication between buyer, suppliers and freight forwarders. Constantly feeding the purchasing systems with up to date statuses and information from the suppliers, SISCommerce contributes to a truly efficient purchasing process.

Flexible

SISCommerce facilitates communication with suppliers through the SISCommerce web solution or through the supplier's preferred e-commerce portal.

Configurable

SISCommerce allows for configuration of inquiries and orders to match the buyer's profile and requirements. Company logo, contact details and terms and conditions can be added to all SISCommerce documents, and can also be configured for multiple company divisions.

User friendly

SISCommerce integrates with the Star FSM and Star CPS purchasing systems, and requires no additional user interface for the buyer. Suppliers are offered an easy-to-use web portal, free of charge.

Efficient

SISCommerce allows for inquiries and orders to be sent electronically by the click of a button in the purchasing system. On return, quotations and order confirmations are uploaded into the system, saving the purchaser valuable time that is normally spent on retyping data from e-mail or fax.

Statuses on inquiries and orders are updated so that the purchaser can easily monitor supplier actions, and reminders are automatically sent to suppliers who have unopened inquiries or orders.

To ease the freight planning, freight forwarders can receive automated e-mail notifications when the buyer sends an order requiring the freight forwarder's services. The buyer selects which freight forwarders to use, and the service is free of charge for the freight forwarder.

Use SISCommerce to:

- Issue inquiries to multiple suppliers
- Receive quotations directly into the purchasing system without retyping
- Issue orders based on the quotations
- Issue direct orders
- Receive order confirmations directly into the purchasing system without retyping
- Receive updated statuses on inquiries and orders
- Automatically remind suppliers about unopened inquiries and orders
- Automatically notify freight forwarders about new orders

Buyer interface

SISCommerce integrates with the Star CPS and Star FSM purchasing systems, enabling the purchaser to trade electronically directly from the purchasing system without the need for any additional user interface. Constantly feeding the purchasing system with up-to-date purchasing statuses and information from the suppliers, SISCommerce contributes to a truly efficient purchasing process.

Supplier interface

The web based supplier solution offers a user friendly interface and is available in several languages. Each supplier receives documents from multiple customers into one account where they can easily browse for documents and serve each of their customers in an efficient manner. The purchase documents look similar to printed documents to facilitate for easy understanding.

Integration with other systems

For optimal performance SISCommerce is integrated with the Star Central Purchasing System (Star CPS) and the Star Fleet Supply Management system (Star FSM). SISCommerce allows for supplier integrations through 3rd party e-commerce portals.

Technical Data

SISCommerce runs on Windows XP/Vista/7 and Windows Server 2003 and 2008. The system supports SQL databases such as Oracle and MS SQL Server.
